

5MP Picture Snapshot

Q: How do I take 5MP picture on UM06 and UM12?

A: There are two ways to take 5M picture.

(1) Keep preview speed but only take 5MP picture.

Easy Instruction: Enable Far Distance Control Mode > Click Snapshot

Enable Far Distance Control Mode

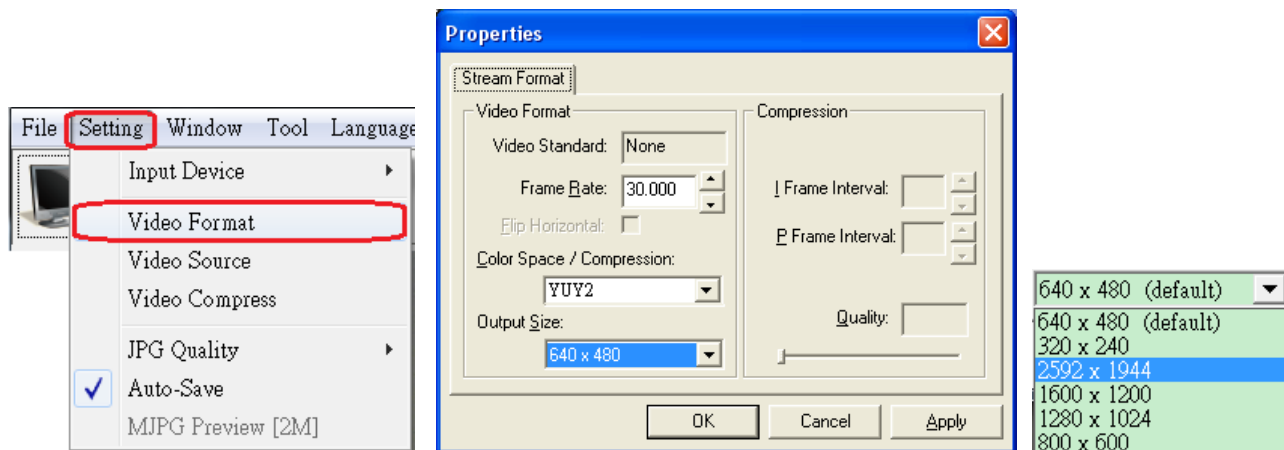

Click "Snapshot " to take 5MP picture directly.

(2) Take 5MP Snapshot and Video Record.

Set the preview resolution to 5MP(2592x1944). Preview image, snapshot, video record will all be 5MP resolution. This way will slower the preview speed.

Easy instruction: Go to Setup>_Format>_ Choose Output size to 2592x1944.

The image shows a 'Properties' dialog box with the 'Stream Format' tab selected. The 'Video Format' section includes 'Video Standard' (None), 'Frame Rate' (30.000), 'Flip Horizontal' (unchecked), and 'Color Space / Compression' (YUY2). The 'Output Size' is currently set to '640 x 480'. A dropdown menu is open to the right, showing a list of resolution options: '640 x 480 (default)', '640 x 480 (default)', '320 x 240', '2592 x 1944' (highlighted in blue), '1600 x 1200', '1280 x 1024', and '800 x 600'. The 'Compression' section includes 'I Frame Interval' and 'P Frame Interval' (both with up/down arrows) and a 'Quality' slider.

(3) UM06 remote control

Press Snapshot button on Remote control, it will deliver 5MP image directly to software.
